Django Apps & the Model Registry

CrossTwin · architecture

core/utils.py::build_model_registry() scans nine domain apps; every generic endpoint is driven by the registries

Django · Vector · Raster · WMS

Number tags = model classes per app. Indicator dashboards (watersupply, housing, urban_heat, builtup) follow calculations.py → views._build_indicators() → HTMX partial; MOCK_DATA fills in when a province is missing.
